

SAFETY INTELLIGENCE™

The Aviation Safety Action Program (ASAP) is a voluntary safety program initiated and sponsored by the Federal Aviation Administration (FAA). The objective of this program is to encourage employees to voluntarily report safety problems that may help identify actual or potential threats to aviation safety. **The FAA has a policy of forgoing enforcement actions** as long as the detected violations are disclosed to the FAA through the ASAP, and the company takes prompt corrective action to ensure that the same or similar violations do not recur.

VOCUS SMS makes it:

- Simple for employees to report
- Simple for the ERC to determine status
- Simple for ASAP Manager to administer

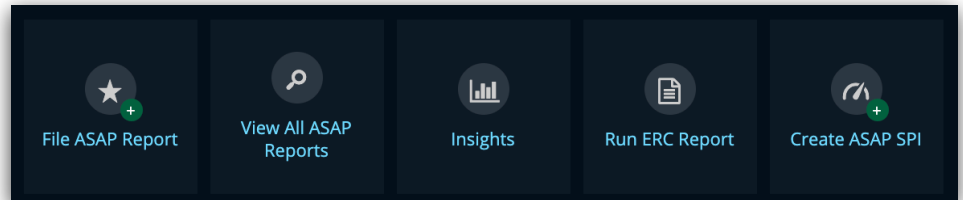

Simple. Meaningful. Seamless.

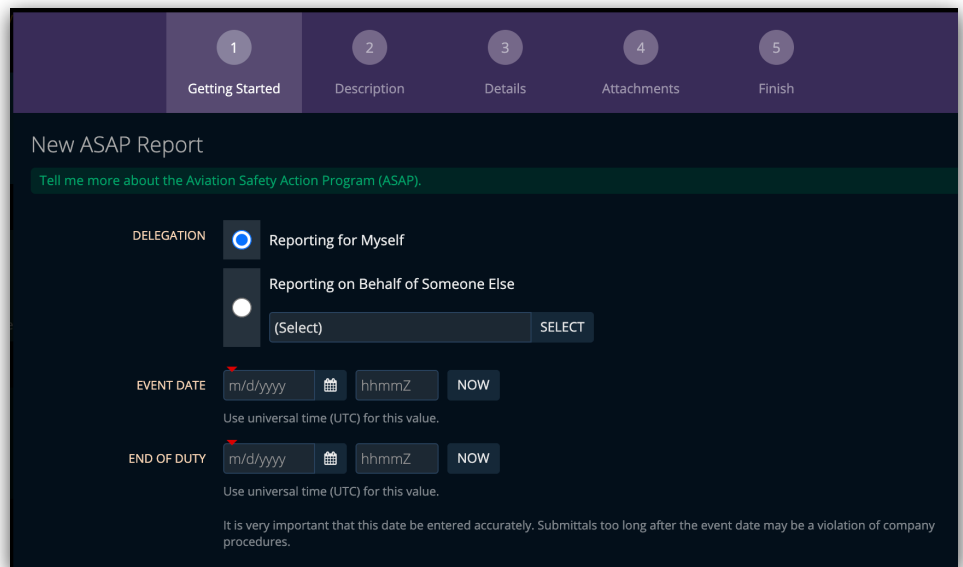

SAFETY INTELLIGENCE™

The ASAP module removes the need for 3rd party facilitation.

Reports are submitted using a simple wizard for quick, meaningful input.

ERC wizards automatically aggregate reports.

Manage your ASAP program from within Vector SMS.
